WHY WE GIVE: A PERSONAL NOTE FROM JON, NEXT PAGE →

THIS ONE'S PERSONAL, FROM JON, OWNER OF JOLLY RALEIGH

Why We Give to Duke Children's

I grew up in Raleigh, and Duke has been woven through my whole life, the good days and the hardest ones.

My kids were born at Duke, healthy. I don't take that for granted for a single second, because I've also sat in those same halls while Duke cared for the people I love when things went the other way.

The people behind this

My cousin **Amie**. My aunt **Cindy**. My grandmother **Deloris**. And right now, today, my mom **Karen**.

Amie carried health complications her whole life and passed at 40. Cindy passed at 41 and Deloris at 64, both to cancer. My mom Karen is 70 and in the fight as I write this.

I'm going to say the next part plainly, because my family didn't get to choose it. Cindy's renal cell and Deloris's uterine cancer trace back to something too many families in this part of North Carolina know firsthand: the PFAS that **Chemours** discharged into the **Cape Fear River** out of Fayetteville. Chemours has lost class-action suits over exactly these harms; and then our state legislature turned around and gave them a shield from state fines. I name them on purpose. The families downstream never got that kind of protection.

Why we give

So when I tell you I understand what it is to have someone you love in a hospital bed, I'm not saying it to sell you lights. And the truth is, the main reason we give isn't any one name on that list; it's the struggle **every** family goes through when someone they love is sick. I've lived that struggle. Giving to Duke Children's is, honestly, the least I can do to stand beside the families going through it right now.

Why children specifically? Because they're just getting started. A kid in a hospital bed hasn't had a fair shot at the ordinary stuff yet. Helping give them a hand up feels like the most honest place I can put our money.

CONTINUED ON THE NEXT PAGE →

Where this comes from

This goes all the way back for me.

Growing up, we lived out past Westlake, the Middle Creek area now, and my mom worked on NC State's campus. Every morning was a good twenty-minute drive in, my dad or my mom at the wheel, the radio on and Bill Jordan in our ears. At home it was WRAL and Charlie Gaddy; I can still hear him reading the farm report, soybeans down fifteen cents this month.

And every year around Thanksgiving, they ran the Duke Children's Radiothon. They built a whole studio for it: rows and rows of volunteers on corded phones, movies playing, folks coming in and out with updates on the goal. One year Donny Osmond was on, and after my mom donated she waited *hours* just for the chance to say something to him. He was clearly exhausted, and he still stopped and thanked her. We'd sit at home as a family and cheer on the hourly goals like it was our team out there. I genuinely miss being able to watch that telethon. Some of my warmest memories of the Triangle are tied to it.

So giving to Duke Children's isn't a marketing line for me. It's how I get to honor North Carolina, my family, and those kids all at once; the same hospital and the same cause that shaped who I am growing up here.

How it works

Two percent of every project we book goes straight to Duke Children's Hospital; every Christmas light install and every permanent RGB job adds to the season's total. And **100% of the proceeds** from our Christmas Portrait Mini Sessions go to Duke Children's; every session booked is money straight to the kids.

Last year, together, we gave **\$1,120**. This year we're going for **\$10,000**.

When you light up your home with us, you're part of that; neighbors helping neighbors, and helping families having a much harder holiday than most of us.

GET AN INSTANT QUOTE →

and help us hit this year's goal for Duke Children's.

*In memory of Amie, Cindy, and Deloris.
For Karen, and for every family in the fight.*

LED 5MM LIGHTS

Standard Plug Series

Description

Our 5MM lights are used by professional decorators who want a durable, reliable, and consistent product. All light sets feature continuous-on technology and come balled and de-tagged for quick and clean installation.

Features

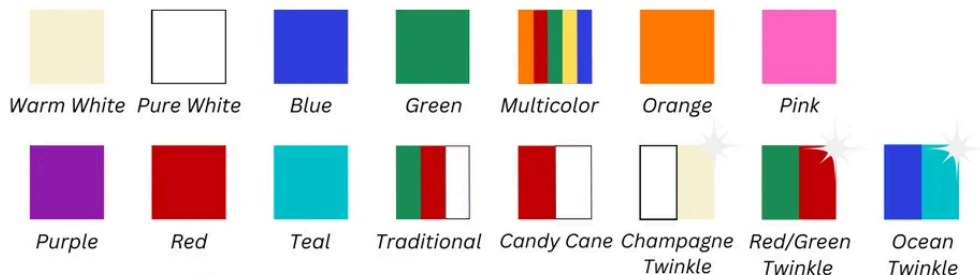

- Commercial Grade - 5 times brighter
- Waterproof Bulbs
- Continuous on Technology
- Backed by a 3-Season Warranty
- Dimmable
- 22 AWG Wire
- Piggy Back Plug for Easy Connections
- Fused Plug
- In line Rectifier
- Connect up to 40 Strands End to End

Colors

Additional and Custom Colors Available per request

LED 5MM LIGHTS

FestivePro Coaxial Series

Description

Our FestivePro Coaxial Series light sets are a top quality non rectified set. This means there is no rectifier in each set and a larger rectifier is placed within the power supply. This along with the water tight coaxial connection is quickly becoming the coaxial light set of choice to reduce service calls and having to replace sets due to a bad rectifier.

Features

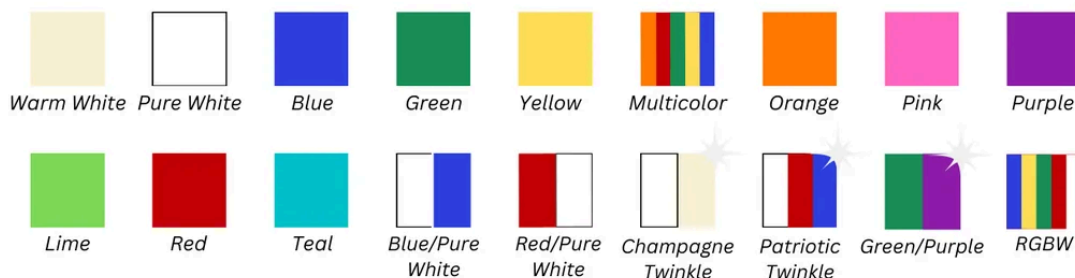

- Commercial Grade - 5 times brighter
- Waterproof Bulbs
- Continuous-on Technology
- Backed by a 3-season Warranty
- Dimmable
- 22 AWG Wire
- Coaxial Secure Watertight Connection
- Rectifier in Power Supply - Sets non-rectified
- Sold in Quantities of 24
- Connect up to 40 Stands End to End

CHRISTMAS LIGHTS

Permanent & RGB Lighting

PERMANENT & RGB LIGHTING

Omni RGB Landscape Lighting

Omni RGB Landscape Lighting offers high-performance, color changing LED fixtures designed to transform outdoor spaces with vibrant customizable illumination. Ideal for residential, commercial, and event installations, Omni RGB products offer advanced control capabilities to create dynamic lighting effects for landscapes, architecture, signage and more.

Precision Optics and Beam Control

A complete line of purpose built landscape lighting fixtures engineered for consistent output and long term performance. Designed to deliver clean, controlled illumination across pathways, trees, facades, and outdoor living spaces.

Low Voltage System with Stable Output

Designed around a stable low voltage architecture that protects LEDs and maintains consistent brightness across long runs. Contractors can design larger systems without uneven light levels or voltage drop issues.

Brass & Aluminum Fixture Construction

Fixtures are manufactured using durable brass and heavy duty aluminum housings for superior heat dissipation and longevity. This construction extends LED life and prevents premature fixture failure in demanding outdoor environments.

Standardized Mounting & Connection Hardware

The Omni line uses standardized stakes, mounts, and connection points to simplify installs and replacements. Crews can work faster with fewer parts while maintaining a clean, professional finish.

Integrated Color Temperature Options

Fixtures are available with optimized color temperature selections designed specifically for landscape applications. This allows contractors to create warm, natural looking scenes that enhance materials, textures, and greenery.

System Expandability & Add Ons

The landscape lighting system is designed to expand easily as projects grow. Additional fixtures and zones can be added without redesigning the entire system, making it ideal for phased installs and long term client relationships.

PERMANENT & RGB LIGHTING

Omni RGB Patio Lighting

Omni RGB Patio Lighting brings vibrant color changing LED effects to patios, pergolas and outdoor spaces. Available in 1, 6 and 12 bulb lengths with 24 inch spacing, these durable fixtures offer both style and function. Control brightness, color and modes via app or remote. Choose from frosted or clear bulb covers to match your look.

Overhead Lighting Architecture

Engineered specifically for overhead mounting applications including soffits, ceilings, pergolas, and patio covers. Fixture geometry and mounting depth are optimized for downward light delivery without bleed or reflection.

Glare Controlled Downlight Performance

Engineered to deliver comfortable, usable light in seating and dining areas. The system minimizes harsh glare and hot spots while providing even illumination where people actually gather.

Weather Rated Components

All fixtures and connections are rated for wet and damp outdoor environments. Contractors can confidently install in exposed patio areas without concern for moisture intrusion or premature failure.

Flicker Free Dimming Capability

Supports smooth, flicker free dimming for a premium user experience. This allows contractors to offer ambiance control that feels high end and performs reliably across different load levels.

Clean Power Distribution Design

Patio lighting runs are designed with efficient power distribution to support multiple fixtures without excessive wiring complexity. This results in cleaner installs, reduced clutter, and easier troubleshooting.

Consistent Fixture Aesthetics

Every fixture in the patio line maintains a uniform look and light output. This ensures a cohesive finished appearance across beams, ceilings, and seating areas without visual inconsistencies.

PERMANENT & RGB LIGHTING

Omni RGB Strip & Neon Lighting

Omni RGB Strip Lighting is a high-quality, color-changing LED tape light system designed for versatile, low-profile illumination in both residential and commercial applications. Ideal for outlining architectural features by lighting soffits, steps, or signage, Omni strip lighting combines vibrant RGB color control with professional grade durability and performance. Can be trimmed to size and extended with connectors, making it ideal for custom-length runs and detailed installations.

Linear Power Distribution Architecture

Engineered as a constant voltage linear lighting system designed for precise runs and uniform output. Supports clean, repeatable installations across straight lines, curves, and architectural features.

Field Cuttable with Defined Cut Points

Strip and neon products feature clearly marked cut points that allow contractors to size runs accurately on site. Maintains electrical integrity and consistent performance when cut to length.

Uniform Diffusion & Dot Free Output

Advanced diffusion materials eliminate visible diode spotting, producing a smooth, continuous light line. This is critical for applications where the light source is directly visible.

Silicone Encapsulation for Flexibility & Protection

Neon products utilize high grade silicone encapsulation that allows for bending and shaping without compromising output or durability. Provides both mechanical protection and consistent light transmission.

High Density LED Configuration

Uses high density LED layouts to deliver strong lumen output while maintaining smooth visual consistency. Enables tighter spacing and brighter runs without sacrificing uniformity.

Multiple Mounting & Channel Options

Designed to integrate with aluminum channels, surface mounts, and recessed profiles. Contractors can achieve a clean, professional finish across interior and exterior architectural applications.
